Topic: Heritage Tourism in Davao City: Challenges in Preservation and Promotion of Historical Sites

1. AI-Generated Summary Audit

I prompted an AI-assisted research tool to summarize the article "Heritage Tourism in Davao City: Challenges in Preservation and Promotion of Historical Sites" by Gultiano and Felicilda (2025). The generated statements were then verified against the original publication.

Topic: Heritage Tourism in Davao City: Challenges in Preservation and Promotion of Historical Sites

1. AI-Generated Summary Audit

AI-Generated Statement / Citation				Human Correction / Empirical Note	
Source Vetted Against		Status			
:-					
-----		:-		:-	
:-					

-					

| The study identifies inadequate funding, urban development pressures, weak policy implementation, and low public awareness as the primary barriers to heritage tourism development in Davao City. | Gultiano & Felicilda (2025) |  Verified | These four challenges were consistently identified throughout the study as the most significant obstacles to preserving and promoting historical sites in Davao City.

|

| Only 32% of local residents surveyed had visited at least one major heritage site in Davao City within the past year. | Gultiano & Felicilda (2025)

|  Verified | The study reported low public engagement with heritage attractions, particularly among younger residents, highlighting the need for awareness campaigns and educational initiatives. |

| Urbanization was identified as a threat by 82% of respondents, particularly around heritage areas such as Osmeña Park and San Pedro Cathedral. |

Gultiano & Felicilda (2025) |  Verified | Survey findings showed strong concern regarding the effects of urban development, traffic congestion, and encroachment on the visitor experience and preservation of historical sites. |

| The researchers concluded that Davao City's heritage tourism sector is already generating substantial international tourism revenue comparable to UNESCO World Heritage destinations.

| Gultiano & Felicilda (2025) |  Hallucination | The article does not provide revenue comparisons, UNESCO benchmarking, or claims regarding international tourism performance. The AI introduced information not found in the source.

|

| The study recommends the use of digital tools such as interactive maps, heritage storytelling platforms, and augmented reality applications to improve visitor engagement. |

Gultiano & Felicilda (2025) |  Verified | The discussion section specifically highlights digital innovations as potential strategies for enhancing heritage interpretation and promotion.

|

| Kadayawan Festival is currently the primary platform through which Davao City's heritage attractions are promoted to tourists. | Gultiano &

Felicilda (2025) |  Partially Verified | The article notes that heritage promotion is often limited to broader tourism branding during events such as Kadayawan Festival. However, it does not claim that Kadayawan is the sole or primary promotional mechanism. The AI slightly overstated the finding. |

2. Reflection on AI Reliability

The AI-generated summary accurately identified several major themes discussed in the article, particularly the issues of funding limitations, urbanization pressures, weak policy implementation, and low public awareness. However, the audit also revealed tendencies to

exaggerate findings and introduce unsupported claims regarding tourism revenue, international recognition, and promotional effectiveness.

These errors demonstrate how AI systems can confuse recommendations, assumptions, and factual findings when summarizing academic literature. While AI can significantly accelerate literature reviews, researchers must still validate all claims against primary sources to ensure accuracy and academic integrity.
